

STAT 625: Case Studies

Homework Due Thursday, September 23

1 The Python Challenge... in R

The Python Challenge website contains a series of “programming riddles” that provide an entertaining way of exploring the **Python** programming language. However, the challenges are not **Python** specific and any modern programming language can be used to create a solution, including **R**. For Homework 2, solve challenges 1 through 4 using **R** and write a short report describing your solutions. You may work in teams of 2 and you should be ready to describe your solutions on the due date, September 23.
